The perception that Africans cannot think, build and do has nothing to do with Africans.

SEBATA Engineering Solutions has mobilized men and women of outstanding **talent** to execute projects at the highest regulatory **standards**, and the impact made to the South African **economy** speaks for itself. Our commitment to business excellence over the past two decades goes beyond the industry and professional **accreditations** that equate our capabilities to those of our global competitors. What differentiates us is our innovative **governance** framework that systemizes the morals and ethics of **Ubuntu** in a measurable way. It acknowledges that we are **human** first, and is a practical way to employ the contribution of others so that people and organizations **grow** mutually. In this way, SEBATA Engineering Solutions is contextualized for the problems of Africans in a global world because **diversity** is the way of life. **We are not imitators.**

Understanding Africa means embracing diversity.

Our Ubuntu-based Governance Management System is essentially a quality standard that develops organizational excellence by integrating tried-and-tested moral and ethical principles into business systems. When there is clarity within an organization regarding conduct, those who drive an organization are systematically encouraged to excel, and then organizational quality and sustainability is a natural consequence.

The benefits of addressing quality at the human level first are stability, sustainability and performance improvements - or 'Excellence' in a single word. When this level of transparency is applied to many organizations in an industry then it also fosters trust in business as the expectations of product or service quality, or even commercial arrangements are also never in doubt anymore. Then, everyone thrives.

PROJECTS

The background of the entire page is a photograph of three large, cylindrical cooling towers. They are set against a vibrant sunset sky with shades of orange, yellow, and red. The towers are dark in color, and their silhouettes are prominent against the bright sky. The overall mood is industrial yet serene.

Our mission is to consistently deliver on Africa's infrastructural needs, thereby empowering & uplifting the spirit of her people.

Rand Water
WATER & SANITATION

Project management of the preliminary and detailed design project stages were first undertaken before drawing up specifications and bills of quantities. We then were appointed project managers for sewage, water and roads infrastructure projects undertaken at various locations.

Transnet TNPA
MARINE TRANSPORT

Construction of offices, berthing and a clinic for the Transnet National Ports Authority. Upon success, we thereafter performed quay upgrades and built the Durban dug-out port. We were also commissioned to build a visitor centre, harbour, foot bridge and data centre at the Durban site that remains one of the most active economic hubs in the Kwa-Zulu Natal province.

Eskom
POWER & UTILITIES

Commencing our appointment to the advisory Panel-B at the national electricity utility company, we undertook inspection services at several power stations including Medupi, the second-largest coal-fired plant in the world. Our technical assurance services contributed to improvements and stability in the national power grid.

The success of construction projects rarely depends on technical expertise only. An appreciation of their impact on society, the environment, and larger business objectives influences the sustainability of assets. Solving such complexities in tandem with technical challenges can deliver a 15% saving on total project costs, not to mention the peace of mind investors enjoy when project timelines are met.

Our Project-Management Office (PMO) serves as the single point of contact for all project-related queries. From there we disseminate structured project reporting for swift decision-making and stakeholder management.

Holistic & integrated services tailored to project needs. That's the SEBATA way.

94% Customer Satisfaction Rate over 10 years.

National & Global Accreditations

Certified member of the African Excellence Forum (AEF)

SEBATA Engineering Solutions is a member of the **SEBATA GROUP OF COMPANIES**, which was established in 2006 in response to the growing pains that South Africa was facing after the inception of **democracy**. Houses, roads and utilities were needed but, above all, education was necessary to ensure that a meaningful **contribution** to the economy was made by every single citizen.

It was the first time that South Africans of all colours and creeds were united on a common **vision**, and we too aimed our operations at helping to create a new future.

But Africa was not Europe, the America's or the Far East. Our continent had its own **culture** and cadence so leveraging global institutionalized knowledge was only the first step in

developing **strategies** and processes that were **localized** to Africa's challenges.

At SEBATA Engineering Solutions, this led to **innovations** in organizational governance and **ethics**, innovation in **technical** methods, innovations in **risk and quality** assessments, innovations in meeting **compliance** requirements, and mostly an innovation in thinking that prioritizes **impact**.

Why?

Because the founding **father** of SEBATA GROUP, Matome Edmund Modipa, believes in protecting, **sustaining** and growing South Africa's own **assets** as they are, after all, our own. That's taking **responsibility**, and is his vision for the **children** of Africa.

“

We built the value that we wanted to share.

”
